

Type of Injury	Common Effects on Players	Most Suitable Decision	Fantasy Cricket Recommendation
Muscle strain (Grade 1)	Mild pain, slight loss of strength, stiffness	May play one inning or with limited workload if pain-free and medically cleared.	High Risk – Consider only in Grand League (GL); avoid Captain/Vice-Captain (C/VC).
Muscle strain (Grade 2–3)	Significant pain, weakness, difficulty moving	Do not play. Rest and rehabilitation for 3–12 weeks.	Avoid – Do not select.
Ligament sprain (Grade 1)	Mild swelling, slight instability	May play one inning or limited workload with support if	High Risk – GL only; avoid C/VC.

		medically cleared.	
Ligament sprain (Grade 2–3)	Moderate to severe swelling, joint instability	Do not play. Rest and rehabilitation for 4–12 weeks or longer.	Avoid – Very unlikely to contribute fully.
Tendon injury (mild)	Pain during movement, stiffness	Limited participation only if symptoms are minimal and medically cleared.	High Risk – Only if confirmed in playing XI.
Tendon injury (moderate/severe)	Persistent pain, reduced power	Do not play. Rest and rehabilitation for 4–16 weeks.	Avoid – High chance of reduced performance or missing the match.
Bone fracture	Severe pain, inability to use limb	Do not play. Rest until healed (6–12	Avoid – Do not select.

		weeks or longer).	
Dislocation	Severe pain, joint instability	Do not play. Rest for 2–8 weeks with rehabilitation.	Avoid – Do not select.
Concussion	Headache, dizziness, poor concentration, slower reactions	Do not play. Return only after completing a graduated return-to-play protocol (typically 1–4 weeks , sometimes longer).	Avoid – Do not select until medically cleared and confirmed in the XI.
Cuts and bruises (minor)	Pain, swelling, tenderness	Can usually play normally if the wound is protected and	Safe Pick – Can be selected normally if in the playing XI.

		bleeding is controlled.	
Cuts and bruises (severe)	Significant pain, deep wound, extensive bruising	Rest until healing (a few days to 2 weeks).	Avoid – Wait until fully fit.
